

LIQUID CRYSTAL DISPLAY DEVICE HAVING SMALL PICTURE FRAME REGION

5

ABSTRACT OF THE DISCLOSURE

A liquid crystal display device has a framework which includes a first frame for supporting a liquid crystal panel, a second frame having an upper portion for covering a peripheral portion of the surface of the liquid crystal panel and a side extending substantially parallel to the side of the first frame, and third members being in the form of clips detachably attached to the side of the first frame. The second frame is fixed to the first frame via the third members. The liquid crystal display device also includes a mechanism for changing the angle of the display.
